SOLUTION SHEET

IT Risk Management and Cybersecurity

Managing risks associated with information technology involves many business functions and requires you to master many disciplines from documenting assets, conducting risk assessments, assessing control effectiveness, managing incidents to demonstrating compliance with IT standards and regulations.

The Challenge

- How do you manage IT risk across different business functions and demonstrate compliance with IT security standards such as ISO 27001 and NIST?
- How do you demonstrate to members of the executive team how business resources are being protected by security technologies and how vulnerable you are?
- How do you coordinate risk activities including program status, incident activities, identification of control weaknesses and remediation plans?

The Solution

SureCloud provides you with the building blocks to cover the various IT risk disciplines. These building blocks come in the form of applications, which you can use in isolation or as an integrated suite, covering all of your IT risk management needs, and providing you with central control over all your IT risk processes.

Our Cybersecurity products build on this base by bringing business context to security data, such as threats and vulnerabilities. By linking IT infrastructure to business applications and processes, your executive teams can see which critical business processes are at risk.

Finally, our ISMS products complete the solution by providing a framework which allows you to manage a full life-cycle ISO27001 Information Security Management System. A NIST CSF Framework will shortly be available.

“Through SureCloud’s centralized platform, we can assess our risk profile in a way that’s not only user-friendly but also highly effective for our business.”

Vikram Sokhi, Information Security Analyst, Thames Water
