

SureCloud[®]

DATASHEET

Risk Management

Whether you are a small enterprise or large global organization, SureCloud provides a single portal to manage all risk types across your organization.

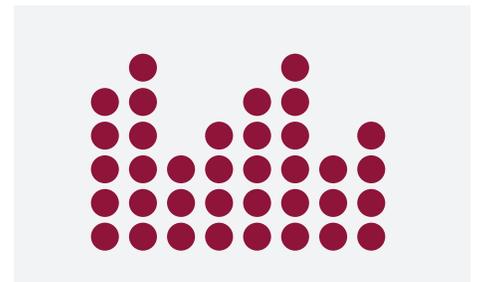

The Challenge

The foundational elements to any risk management program involve the identification, assessment, and tracking of risks. Many organizations waste resources and struggle with program effectiveness when using homegrown, spreadsheet-based risk registers and assessments. More importantly, these methods make it hard to truly understand the business impact of a risk.

The Solution

SureCloud's Risk Management solution provides a streamlined, structured approach to risk management and a central view of risk across the enterprise. SureCloud's Risk Management software solution allows organizations to identify, assess, and manage risks of all types across divisions, business units, business functions, and geographies. Risk registers can be set up centrally or in a distributed arrangement allowing teams to own any given set of risks. SureCloud's Risk Management solution can also aggregate registers comparing different types and approaches of risk side by side, enabling organizations to simultaneously support different risk frameworks, such as ISO, COSO, and IRAM2.

“Through SureCloud’s centralized platform, we can assess our risk profile in a way that’s not only user-friendly but also highly effective for our business.”

Vikram Sokhi,
Information Security Analyst at Thames Water
