

SureCloud®

DATASHEET

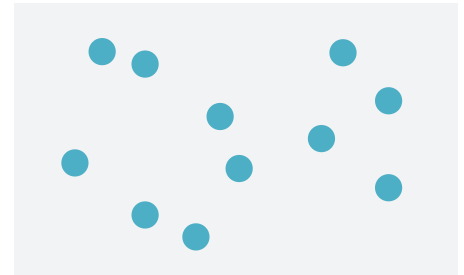

Vulnerability Management

Engineered for any size organization, stay strong beyond your cybersecurity test and receive trend data for continuous improvement.

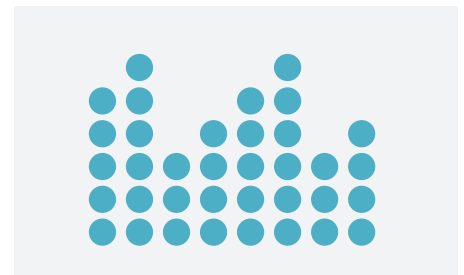

The Challenge

Thriving black markets for stolen business data have resulted in a huge increase in data breaches, which is causing organizations to seek ways to improve their vulnerability management programs and tools. A challenge for organizations is finding a way to assimilate data from different vulnerability sources, and provide business context to vulnerability data ensuring IT infrastructure, applications, and business processes are protected.

The Solution

SureCloud's Vulnerability Management tools provide a central repository for all your vulnerability data, which includes direct feeds from many scanning tools (including scan scheduling) and supports penetration test data upload. Vulnerabilities can be linked to information assets and business processes, allowing your team to focus remediation efforts on the highest areas risk.

“We have a complete picture of our information security and PCI DSS position at any one moment in time via a single platform. I can drill down into the information as required, making it easy to identify any potential vulnerabilities and quickly resolve them.”

Vulnerability Scanning

- Perimeter and internal, network and application layer scanning
- Payment Card Industry Approved Scanning – SureCloud is a PCI Approved Scanning Vendor
- System configuration auditing against policies – providing an automated solution for server and firewall auditing – i.e. verification of PCI Requirement 2.2 (d)
- Data discovery scanning in support of PCI DSS compliance mandatory requirement.
- The agentless scanning engine currently performs security checks, covering over 100,000 vulnerabilities and configuration issues, across a broad range of operating systems, services and applications. Intelligent post-scan processing reduces false positives before results are presented to the end user.

Penetration Test Results Management

- Tabular and graphical presentation of test output including root cause analysis
- Import facility to integrate third-party test results
- Ability to trend across tests and test providers
- Integrated consultant-based support facility

Tasks & Workflow

- Integrated workflow to enable Tasks to be tracked through the vulnerability management process to completion, along with the ability to set reminders ensuring timely responses
- Automated Tasks can be configured to alert key personnel to important issues on critical business assets
- A central Task dashboard shows real-time status and highlights any areas that may require further attention.

99%

of exploited vulnerabilities have been known by IT staff for at least 12 months

80%

of known attacks can be prevented by good security hygiene

9.3%

growth expected by 2026 in the vulnerability management market

Why SureCloud

SureCloud is a provider of cloud-based, integrated Risk Management products and Cybersecurity services, which reinvent the way you manage risk. SureCloud connects the dots with integrated Risk Management solutions enabling you to make better decisions and achieve your desired business outcomes. SureCloud is underpinned by a highly configurable technology platform, which is simple, intuitive and flexible. Unlike other GRC Platform providers, SureCloud is adaptable enough to fit your current business processes without forcing you to make concessions during implementation; meaning you get immediate and sustained value from the outset.
