Cyber Risk Management Capability

SureCloud.

Manage cyber threats with the right combination of software and expertise.

Today, all organizations are increasingly exposed to the actions of cybercriminals and cyber-attacks are increasing in both sophistication and frequency and the task of managing cyber risks and optimizing cyber defences is becoming more and more challenging for organizations.

SureCloud's unique Capability-based approach provides the perfect combination of software and expertise that your organization needs to effectively manage and mitigate cyber risks. Our industry-leading Cybersecurity Management software is complemented by our cyber consultancy and testing services, bringing deep domain expertise to your organization.

The challenge

- Organizations face increasing attack surfaces, which are multi-faceted and resource intensive to protect.

- Cybersecurity management is complex, involving interconnected tasks and the orchestration of large number of cybersecurity controls.

- Companies often lack the necessary tools and expertise required to effectively enhance their security posture.

- Ad hoc and periodic penetration testing is insufficient protection against sophisticated cyber threats.

- Organizations do not have a clear idea of what cybersecurity activities are fit for purpose.

Sure you can.

The solution

Transform your Cyber Risk Management program with SureCloud's subscription-based Capability-centric approach.

The SureCloud Cyber Risk Management Capability

- SureCloud provides the software you need combined with expert consultancy - we work with your internal stakeholders to ensure the success of your program.

- Working with your team, we develop a comprehensive and varied cybersecurity program, which includes:
  - **Cybersecurity assessments**
  - **Continuous penetration testing**, including:
    - *Infrastructure*
    - *Applications*
    - *Cloud*
    - *Product*
  - **Regular Adversary Simulation engagements**:
    - *Red Teaming and Attack Readiness*
    - *Ransomware Risk and Resilience Assessments*
    - *Social Engineering and Phishing simulations*

- The powerful SureCloud platform is leveraged to deliver all reporting, dashboards and remediation activities from Cyber Risk Management Capability engagements.

- All subscription-based clients benefit from free vulnerability scanning.

Why choose SureCloud?

Unrivalled expertise

- Address your skills gaps - leverage SureCloud's industry-leading consultancy and testing services.

- Benefit from our knowledge of best practice, gained over many thousands of cyber engagements.

Achieve a clear view of cyber risk

- Gain visibility and insight into your system vulnerabilities so you can efficiently protect your business.

- Operationalize risk data within the SureCloud platform, to enable effective remediation.

Adopt cyber risk management best practice

- Design and deploy a comprehensive, multi-faceted Cyber Risk Management operation, including robust processes for identifying, prioritizing and remediating vulnerabilities.

- Embrace and embed recognized best practices, optimized for your organization by our expert Consultants.

De-silo and secure your sensitive cyber risk data

- Consolidate all cyber risk data and insights - leverage our powerful platform to centrally manage all processes and data.

- All data from our penetration tests and other cyber activities are documented within the SureCloud platform.

Connected, contextualized cybersecurity insights

- Shorten your feedback loops and inform your decisions with continuous and ongoing cybersecurity activities.

- Contextualize your real-time risk data by connecting vulnerabilities to assets.

Innovative, all-inclusive pricing

- Work with our experts to create a flexible cyber risk package that fits your requirements.

- Consume SureCloud's Cyber Risk Capability via an all-inclusive fee that covers licensing, consultancy, implementation and professional services, plus ongoing support.

> We had brilliant testers and a great manager. We felt like our full requirements were listened to and actioned on. SureCloud did a very thorough piece of testing. Coming from a testing background, I can credit that the test was a very strong piece of work.

Jake Bernardes, Head of Information Security at SingleStore
