

SureCloud®

RISK MANAGEMENT CAPABILITY

Manage your key technology risks with the ideal combination of software and expertise.

Managing the diverse risks that your organization is exposed to is becoming a significant burden for most organizations. IT Risk Management often consumes substantial resources, while delivering sub-optimal outcomes for the business.

SureCloud's unique Capability-based approach provides the perfect combination of software and expertise, to effectively manage and mitigate your risks. Our industry-leading IT Risk Management software is complemented by our Consultancy services, which will help you to streamline and automate your risk management processes and embed best practice into your operations.

The challenge

- Managing a diverse range of risks is a complex process, involving multi-faceted assessments and the collection of large quantities of data.
- Companies often lack the necessary tools and expertise required to manage these processes effectively.
- Organizations must identify, assess and prioritize all technology and business risks and determine the impact of each on their business operations.
- Evaluations must take place to ensure that all risks are managed within the organization's risk appetite.
- The organization must devise remediation strategies for each identified risk and define a large number of complex processes.

The Solution

Transform your Risk Management practice with SureCloud's Capability-centric approach. Our unique Manage Risk Capability provides the tools and expertise you need to effectively manage your IT and other business risks.

- We equip you with the software and expertise you need to manage risk; all delivered precisely at the point you need it.
- All risk management processes leverage the SureCloud platform and its embedded, best-of-breed content.
- Our Consultancy team will provide expert guidance to ensure your organization's successful transformation.
- Our expert Consultants apply our proven methodology to safeguard your transformation.
 - o Significant sources of risk are identified and documented in a comprehensive risk register.
 - o We collaborate with your team to determine your organization's appetite for each identified risk.
 - o Our Consultants apply their deep domain expertise to define detailed remediation processes and controls, in line with industry best practice.
 - o SureCloud delivers a detailed remediation strategy, which prioritizes all key risks against a clearly defined timeline.
- Our Gartner-recognized IT Risk Management software is used to track all cybersecurity and technical remediation activities.
- All risk data is stored within the SureCloud platform, which is also used to deliver highly granular yet clear reporting.

Why choose SureCloud?

Achieve a clear view of organizational risk

Adopt risk management best practice

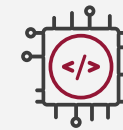

Centralize and orchestrate your risk management operations

Leverage deep domain knowledge

Make smarter decisions

Embedded expertise

Fully integrated, best-of-breed GRC solutions

Innovative, all-inclusive pricing

SureCloud's Manage Risk Capability is sold as part of an all-inclusive subscription model, which includes everything from licensing, content, consultancy, implementation and professional services, in one flat fee.

SureCloud provides a best-of-breed suite of Gartner-recognized Governance, Risk, and Compliance solutions, delivered with fully integrated, in-house Professional Services and Consultancy. SureCloud technology, combined with our expertise will efficiently deliver the GCR outcomes that your organization has been striving for.

SureCloud's Platform is enabling us to take a far more agile approach to risk management, focussing on taking action to mitigate threats and exploit opportunities, with substantial time and cost savings as a result.
