

Cyber Risk Capability

DATASHEET

Manage your exposure to cyber threats with the ideal combination of software and expertise.

Today, all organizations are increasingly exposed to the actions of cybercriminals. A major breach or a successful ransomware attack could compromise your organization's ability to remain operational and in the worst-case scenario, your company could cease trading as a result of threat actors. Cyber-attacks are increasing in both sophistication and frequency, so in order to reduce the impact of risks, organizations must optimize their cyber defences. However, most organizations lack the necessary skills and resources required to successfully and efficiently manage the threat of cyber attacks.

SureCloud's unique *Capability*-based approach provides the perfect combination of software and expertise your organization needs to effectively manage and mitigate your cyber risks. Our industry-leading GRC software is complemented by our consultancy services which will bring deep domain expertise to your organization. SureCloud Consultants will help you to streamline and automate your cyber risk management processes and embed best practice into your operations, to ensure that your business-critical systems and infrastructure risks are managed and protected as effectively as possible.

The Challenge

- Managing your organization's extensive attack surface is a complex process, involving multi-faceted tasks and the orchestration of large number of cybersecurity controls. Companies often lack the necessary tools and expertise required to manage these processes effectively.
- Organizations must identify, assess and prioritize key systems and applications to determine the vulnerability of each and the likelihood of being exploited by threat actors.
- Extensive penetration testing must take place on an ongoing basis, to identify key vulnerabilities present within your organization's infrastructure.
- The organization must leverage the data which emerges from penetration tests to inform remediation strategies for each identified vulnerability, including the definition of detailed processes to implement appropriate cybersecurity controls, in line with recognized best practice.

The Solution

Transform your Cyber Risk Management practice with SureCloud's *Capability*-centric approach. Our unique Cyber Risk *Capability* provides the tools and expertise you need to effectively manage key vulnerabilities across your enterprise. Our team of highly experienced Consultants will provide expert guidance needed to transform your organization's security posture.

- We equip you with the software and expertise you need to manage cyber risk; all delivered precisely at the point you need it.
- All cyber risk management processes leverage the SureCloud platform and its embedded, best-of-breed content.
- Our expert Consultants apply the proven SureCloud IMAR (Identify, Manage & Assure, Remediate) methodology to safeguard your transformation.
 - **Identify** your business-critical assets.
 - **Manage & Assure** – through a range of assurance activities, understand your organization's threat and vulnerability landscape and determine your appetite for each risk. Leverage our Consultants' deep domain expertise to define detailed controls and remediation processes, in line with industry best practice.
 - **Remediate** all prioritized risks and vulnerabilities, through the implementation of appropriate controls, against a clearly defined timeline.
- Leverage our powerful and intuitive software to track all cybersecurity and technical remediation activities, to centrally store all data, and the SureCloud platform can also be used to deliver highly granular yet clear reporting.

Key Benefits

Achieve a clear view of cyber risk

Ensure your Cyber Risk Management program effectively protects your business. Achieve the necessary visibility and insight into your system vulnerabilities to minimize the risks of breaches, data loss, ransomware attacks and downtime.

Adopt cyber risk management best practice

Embrace and embed recognized best practices, optimized for your organization by our expert Consultants. Implement robust processes for identifying and prioritizing vulnerabilities and determining the most appropriate controls to mitigate risk.

Centralize and orchestrate your cyber risk management operations

Centrally manage all cyber risk management processes via the powerful and highly intuitive SureCloud platform. Data from our penetration tests is documented within the SureCloud platform, in an interactive format which makes executing remediation tasks simple. Tasks can be easily allocated within our software, and all actions can be tracked and reported.

Increase efficiency

Reduce manual and repetitive tasks by leveraging pre-built workflows, embedded, pre-built content and control-sets notifications, and reporting to streamline and accelerate your cyber risk management processes.

Make smarter decisions

Shorten your feedback loops and inform your decisions with continuous testing. Real-time vulnerability data and reporting provide visibility of which areas are at risk, so you can act quickly to mitigate them.

Why choose SureCloud?

Embedded expertise

Our platform has been built and aligned with industry best practices. We worked with our clients to understand their needs and designed a solution that will help any organization become more effective at managing its GRC workloads. You benefit from that best practice and embedded expertise, out-of-the-box.

Fully integrated, best-of-breed GRC solutions

SureCloud's suite of Gartner-recognized Governance, Risk, and Compliance solutions provide a means of seamlessly managing a range of GRC operations. Our fully integrated solution-set eliminates data silos from your organization, increasing your operational efficiency and providing a more accurate overview of risk and compliance, across your organization.

Innovative, all-inclusive pricing

SureCloud's Cyber Risk *Capability* is sold as part of an all-inclusive subscription model, which includes everything from licensing, content, consultancy, implementation and professional services, in one flat fee.

“ SureCloud’s Platform is enabling us to take a far more agile approach to risk management, focussing on taking action to mitigate threats and exploit opportunities, with substantial time and cost savings as a result. ”

Ben Whitestone, Head of Governance at the Office for Students
