## DATASHEET

# PCI Compliance Management

Increased regulation and the risk of reputational damage associated with non-compliance are driving organizations to rethink the way they manage their compliance programs.

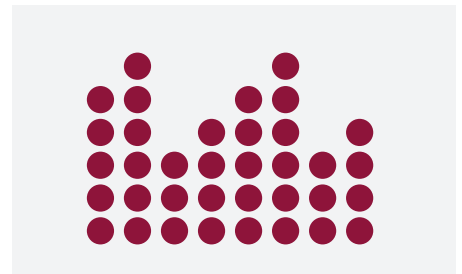

## The Challenge

Complying with the PCI Data Security Standard (PCI DSS) can be an expensive, complicated and labor-intensive process. Having responsibility for the compliance program itself is frustrating when contacting and capturing details from various stakeholders. It becomes a resource-intensive task and providing any kind of update to senior management can be complex and time-consuming. Many organizations manage their PCI DSS compliance processes using manual systems like spreadsheets, where centralized control and reporting on compliance activity is often unachievable.

## The Solution

SureCloud's PCI Compliance Management solution for PCI delivers your PCI DSS programs as business-as-usual (BAU) activity, making them more efficient and effective. The cost and effort of compliance is reduced while supporting the recommendations set out in the latest revision of PCI DSS. SureCloud's PCI Compliance Management solution offers faster certification, reduced audit costs, and reduced risk. Remediation is focused on areas of highest risk and retention of compliance status. Finally, your compliance program and its effectiveness can be easily tracked in real time through live dashboard charts and reports.

**“Using SureCloud’s PCI Compliance Manager application we have been able to simplify our reporting and auditing processes, enabling us to monitor and ensure compliance continually. We now have high visibility of our compliances status from the reporting that application delivers and the overall simplicity of the solution has greatly improved efficiency.”**

## Clear, Efficient Processes

- Dashboard-driven view of program status – summary charts for senior management, in-depth charts, and tables for operational teams
- Implement BAU processes with ease, using our automated control monitoring tasks, project tasks, and remediation management. Increasing efficiency and giving you the ability to report on incremental improvements in program status.

## More Than Just PCI DSS

- Central control libraries based on industry standards such as ISO27001, SANS Top 20, NIST SP 800-53, HIPAA, etc. with the capability to mix and match, and add bespoke controls as required
- Ability to attach one or more operational controls (with associated evidence) to a PCI DSS requirement and then re-use the same information for other compliance programs as required - track, monitor and record once
- Technical Control Monitoring
- Built-in Vulnerability Management solution (PCI ASV accredited), which combines the management and reporting from manual penetration test results and automated vulnerability scanning data from third party sources
- Integration of external data sources such as anti-virus or patch management status information for a holistic view of risk.

69%

of consumers would be less inclined to do business with a breached organization

167%

PCI DSS compliance increase since 2012

60%

of small or medium businesses that have been breached close within six months

## Why SureCloud

SureCloud is a provider of cloud-based, integrated Risk Management products and Cybersecurity services, which reinvent the way you manage risk. SureCloud connects the dots with integrated Risk Management solutions enabling you to make better decisions and achieve your desired business outcomes. SureCloud is underpinned by a highly configurable technology platform, which is simple, intuitive and flexible. Unlike other GRC Platform providers, SureCloud is adaptable enough to fit your current business processes without forcing you to make concessions during implementation; meaning you get immediate and sustained value from the outset.
