## DATASHEET

## PCI ASV Scan Management

No need to wait for a busy consultant's availability when you can use this Cloud-based application backed by SureCloud cybersecurity experts to automate your PCI scans and sustain cardholder confidence.

### The Challenge

The Payment Card Industry Data Security Standard (PCI DSS) exists to reduce the risk of debit and credit card data loss. The regulations mandate that any businesses that process, handle or store card data are required to be PCI DSS compliant. And under requirement 11.2.2, quarterly external vulnerability scans must be performed by an Approved Scanning Vendor (ASV).

Typically, PCI ASV scans are a manual process that takes consultants weeks to schedule, perform and then report on the findings. As a static, paper-based document, it acts as a photo, capturing your infrastructure at a specific moment in time. It doesn't prove your ongoing compliance or tell you the remediation controls you need to implement, which makes the report nothing more than a 'tick-box' exercise.

But, make the information dynamic, present it in real-time and wrap an intelligence layer around it, and suddenly you have something that creates value for your business.

### The Solution

PCI ASV Scan Management eliminates the hassle of compliance by giving you complete control over your PCI ASV scans. Now you can schedule scans at your convenience, re-scan instantly and view detailed reports on individual vulnerabilities, including their description, recommended solution and any technical information.

**“SureCloud's dashboard access to the PCI DSS scans, with red, green and amber alerts, cuts the number of people required to monitor our PCI security compliance. The platform dissects the information and presents it to us in an easy-to-use format.”**

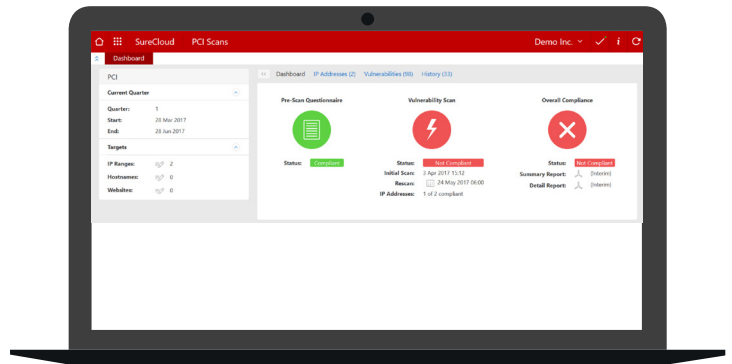

**Abi Dakin, ICT Compliance Specialist, Rotherham MBC**

## Designed to meet PCI DSS requirement 11.2.2, choose PCI ASV Scan Management for:

- Real-time information: immediately view the status of each target and identify any vulnerabilities causing a 'non-compliant' state.
- Simple compliance: once an overall 'compliant' state is reached across the scope, simply download your attestation reports for submission to the relevant acquirer(s).
- Greater visibility: control most aspects of your workflow through a centralized dashboard, including completing the PSQ, scheduling of scans, and retrieving reports.
- Granularity: break down compliance and scan results by IP, listing all vulnerabilities so false positives and compensating controls can be quickly identified.
- Integration with your wider risk management: underpinned by the SureCloud Platform, PCI ASV Scan Management seamlessly draws information from your other GRC applications.
- Our expertise: certified as a PCI DSS compliant ASV for the 10th year running, you can access our cybersecurity experts any time for best-practice advice.

“Because SureCloud offers just one integrated solution for numerous needs, we can add to our protection, such as scanning for PCI compliance, when we want. We’ve gained a cost-effective way of meeting our evolving security compliance requirements as well as invaluable advice about what direction to go in with our information security strategy and technologies.”

Philip Barbrook, Enterprise Architect, CSD

### Why SureCloud

SureCloud is a provider of cloud-based, integrated Risk Management products and Cybersecurity services, which reinvent the way you manage risk. SureCloud connects the dots with integrated Risk Management solutions enabling you to make better decisions and achieve your desired business outcomes. SureCloud is underpinned by a highly configurable technology platform, which is simple, intuitive and flexible. Unlike other GRC Platform providers, SureCloud is adaptable enough to fit your current business processes without forcing you to make concessions during implementation; meaning you get immediate and sustained value from the outset.
