## DATASHEET

# Information Asset Management

Discovering and documenting your information assets is a critical.

## The Challenge

Whether you're seeking regulatory compliance, tightening your cybersecurity posture or managing your data privacy program, discovering and documenting your information assets is a critical but daunting and difficult task.

## The Solution

SureCloud's Information Asset Management system provides organizations with a common understanding of what physical and electronic data they hold, where it is physically stored and their respective levels of data sensitivity and classification. The Information Asset Management software helps to identify and record the data subjects, volumes held, retention periods and who has access to the assets and their contents. This information is then connected with the broader organizational model of applications and infrastructure to provide to help understand and bring context to how these assets support day to day business operations.

Uniquely, SureCloud's Information Asset Management solution can also connect both internal and external vulnerability scanning data to your information assets to ensure you fully understand the risks associated with those assets.

**“SureCloud has minimized the threat of non-compliance, enhanced the security of our data and given us a visibility that we simply didn't have previously. And it's all delivered in a single, cost effective package.”**

**Dennis Joseph,**  
Computer Services Manager, HSS Hire

## Key benefits

Simple Solutions Delivering  
Enterprise Outcomes

SureCloud is a provider of cloud-based, integrated Risk Management products, which reinvent the way you manage risk.

- Streamline your processes
- Works as your single source of truth
- Automate your activities
- Real time dashboarding and reporting
- Great user experience
- Integrate your Governance, Risk and Compliance journeys

## Information Asset Management Features

### Information Asset Manager

Recommended complementary app that helps you understand your data inventory and entity relationships by cataloging information assets and their encompassed data, privacy classification and CIA assessment; identify the processes, products and services they're used in; and the infrastructure (systems and applications) and underlying components where they are stored and physically located.

### Information Asset Manager for GDPR

Records and maintains data inventory, catalogs data held in each type of document, and includes respective levels of data sensitivity and internal data classification. Identifies data subjects, volumes held and retention periods, and groups users by access to their contents.
