## DATASHEET

## Vulnerability Assessment Services

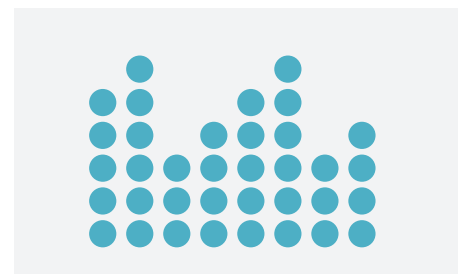

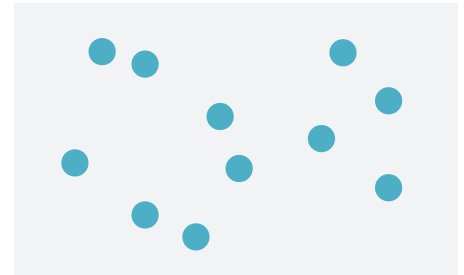

SureCloud's accredited cybersecurity team uses powerful technology to deliver a human-led assessment service and provide serviceable output.

### The Challenge

Fully automated Vulnerability Scanning can cover large suites of known vulnerabilities, but the major limitation is that without human intelligence, there are high false positive or false negative rates and there is typically no contextualized and prioritized output generated.

### The Solution

SureCloud's Vulnerability Assessment Service will cover large suites of known vulnerabilities, but crucially qualified consultants configure and manage the scans which are run at an agreed frequency. Scans are continually monitored, and when complete, SureCloud's expert consultants then analyze and validate the results. Following a process of manual verification, the team then delivers a dedicated report via the SureCloud Platform, grouping vulnerabilities into findings and prioritizing remediation actions per industry best practice. This solution works particularly well in between (and not in replace of) penetration testing cycles, delivering maximum assurance levels to organizations working in this way.

We are proud to hold the following accreditations:

in association with  
National Cyber  
Security Centre

# Why use SureCloud's Vulnerability Assurance services?

## CREST accredited

CREST has created a separate accreditation for Vulnerability Assessment (VA) to eliminate confusion within the buying community between VA and a Penetration Test (PT). SureCloud has been accredited as a Vulnerability Assurance provider by CREST.

## Beyond automation

Through VA we apply human intelligence to automated scan output, resulting in actionable reporting.

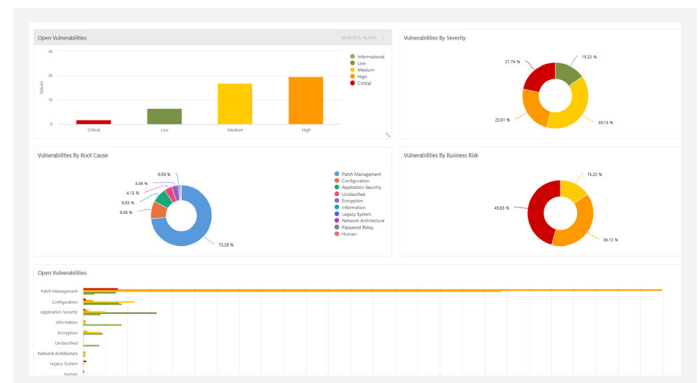

## Gain access to a world class cybersecurity team

Certified by the National Cyber Security Centre (NCSC) & CREST SureCloud's consultants stay with you throughout the entire test life-cycle from scoping through to vulnerability discovery and remediation.

“SureCloud has given us a fantastic tool, as well as a higher level of customer service. We can now go back to the relevant operations people with proof of vulnerabilities that need fixing. We couldn't do that before. Unsurprisingly, we're looking at adding other SureCloud services to the solution.”

Abi Dakin, ICT Compliance Specialist, Rotherham MBC
